The Project Reportcard is a project status report designed to help project managers identify the non-compliance issues in their projects, project teams, and organizations. The report card can be used in two ways: 1. By downloading the report card template to help a project manager find the non-compliance issues in their projects. 2. The project status report can be used to help an organization prepare for their project update and communicate the compliance issues with their PMO and the project managers. Although the report can be used by anyone to prepare a project status report, it is designed to be used by Project Managers to communicate and prepare for project updates. Key Benefits: Customized Project Status Reports A project status report, often referred to as a Project Reportcard, is a report that helps a Project Manager assess the non-compliance issues with their project. Project Reportcard includes 1 organization-specific field for each compliance category. The Reportcard gives the Project Manager the ability to create an organization-specific project status report. The report can be designed to communicate compliance or the non-compliance issues with their PMO and management team, Project Team, and their organization. Compliance Audit Reports A compliance audit report can be created by selecting the Organization Audit link. This report is available for PMO's to check compliance of the project managers' organization. Customizable Project Template A project template is a project that a Project Manager can import in order to create a project based on that template. A Project Template can be customized with fields that are specific to the organization. Organization-specific Project Templates are created as part of the process of creating a Customized Project Report Card Template. Categorized Project Teams Organizations can have multiple project teams. Organizations can assign a specific Project Team to work on specific project types. Project teams are grouped in 4 different sections based on their project type: Project Team = Project Type = Organization = Project = Team = Non-Project Examples: Project Teams = Project Teams = Project Teams = Project Teams = Project Teams Project Teams can be assigned to a project by Project Managers when the project is created and also when a project is updated. Creating Project Teams is disabled on all project types. Reporting Project Teams Organizations can be assigned a specific Project Team. Each Project Team is identified by a project team ID and contains a custom field called Project Team Team. Organizations can have multiple Project Teams Project

- Projects between \$100,000 and \$1,000,000 - 10-20 projects per year for a project manager - Under 5-8 months duration This project was implemented over a 3 year period (starting in July 2014 and completed in July 2017). This project was only done for internal reporting and quality assurance purposes and no outside sources were used for reporting and quality assurance purposes. This report was tested on Project Management Professional 2007, Project Professional 2008, Project 2010 and Project 2013. Version 1.0.5 Added options to view projects as bar charts. Projects between \$500,000 and \$1,000,000 are now reported as bar charts. This view is available in the bar charts section of the project report card. Version 1.0.2 Changed the filter to default to projects with a status of current on the project status report card to reduce the number of projects in the report to those that are within 2 weeks of being completed. Version 1.0.1 Filtered out project reports with a status of to be completed or completed. Projects that are less than 2 weeks out from being completed are no longer included in the project report. This prevents using this project report for quality assurance purposes as projects are completed to quickly. 0 votes loading... This is a sample application that provides a project report card using the new Project Managers' Scorecard. It allows a project manager to create a Project ReportCard for a project. - The Project Reportcard was designed to be a tool to help Project Managers assess their projects based on organizational standards implemented by their PMO. Understanding what the organizational KPIs are going to look like before their project update is published, can help a project manager avoid non-compliance issues and prepare to address real project challenges. Most PMs find value in being able to see their Project Reportcard before it is visible to the PMO and management team. The Project Reportcard also makes it easier for the PMO to verify compliance with organizational standards. Master projects, projects based on enterprise project templates and non-template projects are supported. The Project Reportcard is written in VB.Net using Visual Studio Tools for Office (VSTO) and built in Microsoft Visual Studio 2008. It is deployed as an Add-In for Microsoft Office Project Professional 2007. Full functionality requires a Microsoft Office Project Server 2007 and the creation of several custom enterprise fields. Description: This is a sample application that provides a project report card using the new Project Managers' Scorecard. It allows a project manager to create a Project ReportCard for a project. The Project Reportcard was designed to be a tool to help Project Managers assess their projects based on organizational standards implemented by their PMO. Understanding what the organizational KPIs are going to look like before their project update is published, can help a project manager avoid non-compliance issues and prepare to address real project challenges. Most PMs find value in being able to see their Project Reportcard before it is visible to the PMO and management team. The Project Reportcard also makes it easier for the PMO to verify compliance with organizational standards. Master projects, projects based on enterprise project templates and non-template projects are supported. The Project Reportcard is written in VB.Net using Visual Studio Tools for Office (VSTO) and built in Microsoft Visual Studio 2008. Description: This is a sample application that provides a project report card using the new Project Managers' Scorecard. It allows a project manager to create a Project ReportCard for a project.

What's New In?

This project reportcard is a tool for Project Managers to get a basic understanding of a project, its problems and the potential solutions based on what is already implemented in the project. Use cases: Get a Project Reportcard and view the project status and manage your project. Get a Project Reportcard and keep a summary report of what has been completed so far. Get a Project Reportcard and view it as a reminder of what was agreed upon and what is still left to be done. This project reportcard was a project I decided to write when I saw the usefulness of similar applications for using an organization's standards. The original idea was to write a basic Microsoft Project reportcard that would provide a simple report for a Microsoft Project Server 2007 project. Requirements: The project reportcard should be basic enough to allow a relatively unskilled user to use the tool The report card should be published so that it is visible to the project owner and manager. The report card should provide sufficient information about the project to allow a project manager to understand what is still to be done and what has been completed so far. Design decisions: The project reportcard should be fairly easy to use, so I focused on usability I designed the reportcard to be easy to use, so I decided to keep it simple and to allow it to be used by the majority of users (e.g., PM, technicians) I decided to have a non-intimidating appearance, so I created a simple design I decided to use only icons to simplify the presentation of the information, I kept the message of the project fairly simple and kept the use cases to a minimum I decided not to use any text (for reasons of usability) The report card comes with a help file so users can get started quickly and learn how to use the tool Each of the screenshots shows what the report card looks like. Some of the screenshots show the actual report in its published form. The report card can be published to a project that has been created or to a template project. In the latter case, there will be an option to copy the project report card template to the project and then make changes to the copy before publishing. The report card is intended to be added to a project as a custom project field. The project report card can be added to a project, published to the project report card, and saved to a project as a list or a table. The report card is published when you save the report card to a project. For example, it is possible to publish an individual report card, such as a project task report card. Support Add-Ons Project Report Card adds two custom list fields, Project Report Card Report and Project Report Card Description, to the list. When these fields are added to a project, the

System Requirements:

Intel Core i3: 2.13GHz or faster, 4GB RAM Intel Core i5: 2.5GHz or faster, 4GB RAM Intel Core i7: 2.4GHz or faster, 8GB RAM AMD Athlon X4: 2.1GHz or faster, 4GB RAM AMD Ryzen: 2.0GHz or faster, 8GB RAM 4GB VRAM recommended OS X 10.10 or later Minimum configuration is 64-bit Windows 7 or Windows 8/8.1 Recommended
