How do i show that on my site to show that What i did: I saved the text that is in this page on my sql database This is the code on my page. Title Text A: You need to keep in mind that "about" tab only show the info you have saved in the database for a specific account. If you go to "preferences" and set that "view about" tab you'll see a "Profile" section on the left where you can save a separate "about" tab for each account. I. Field of the Invention This invention relates to a method and apparatus for forming tubular carbonaceous structures, and to such structures formed thereby. II. Description of the Prior Art The present invention is an improvement over U.S. Pat. No. 3,943,097. In U.S. Pat. No. 3,943,097, polymeric materials are formed into a tubular structure having carbonaceous material deposited thereon. The tubular structure is heated to a temperature at which carbonization occurs, thereby converting the polymeric material into carbon. The tubular structure is then cooled so that carbonization takes place while the structure remains in its form. The tubular structure may be formed by extruding polymeric materials and cross-linking the polymeric material while the extrudate is in its extruded form. It may also be formed by injecting polymeric materials into a mold having an interior wall, and providing means for thermally heating the mold. U.S. Pat. No. 3,943,097 has been widely accepted as a successful method for forming tubular carbonaceous structures from polymeric materials. However, it has been found that some polymeric materials tend to absorb gases during thermal heating. The absorption of gases results in an increase in volume of the polymeric material. The polymeric material expands to a greater extent than the thermal environment permits. This results in an uncontrolled expansion of the polymeric material, and consequently, it is not possible to properly control the size of the tubular structure. This causes the tubular structure to have a cross-section that is larger than the polymeric material from which it is made. In addition, it has been found that polymeric materials having a high dielectric constant tend to absorb gases during thermal heating. The absorption of
